

Frutto di una sperimentazione avvenuta sul campo, il lavoro di Patricia Urquiola segna un ulteriore approfondimento del tema dell'intreccio.

Schiene intrecciati in polietilene si abbinano a una base in acciaio zincato verniciato nero o bianco con polveri poliestere, producendo un elemento modulare di due diverse dimensioni, accostabile con estrema libertà a formare sedute lineari, angolari o con terminali chaise longue.

Elementi pouf-tavolino possono essere utilizzati sia a intervallare le sedute, sia ad aumentarne la profondità.

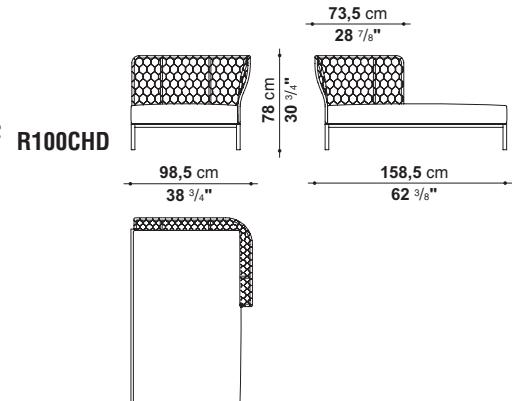

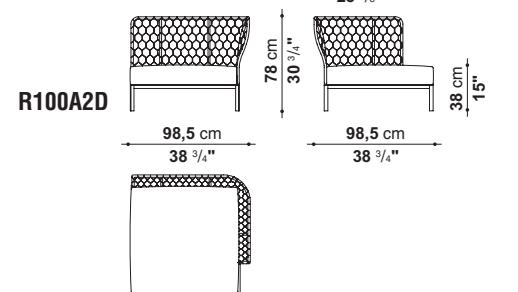

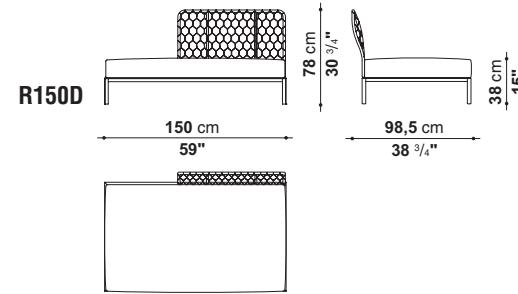

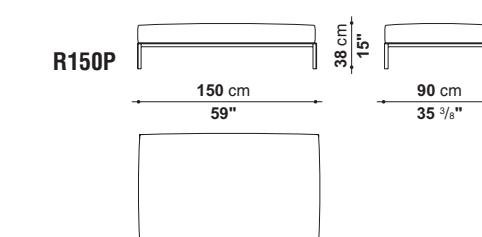

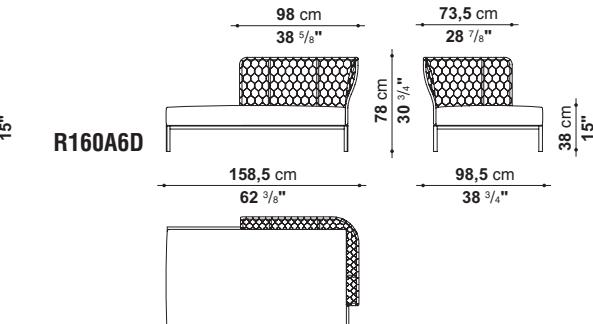

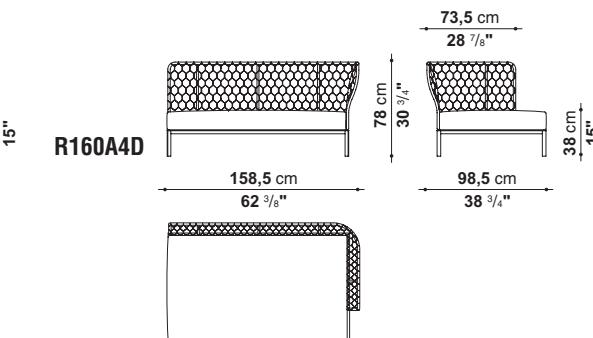

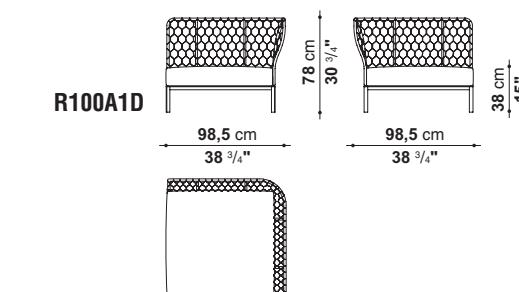

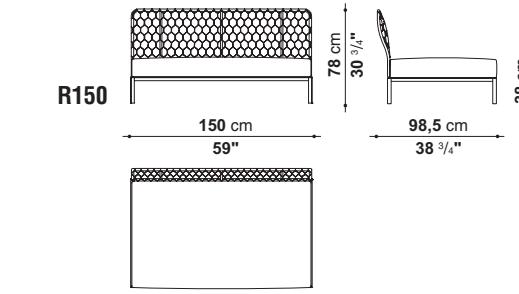

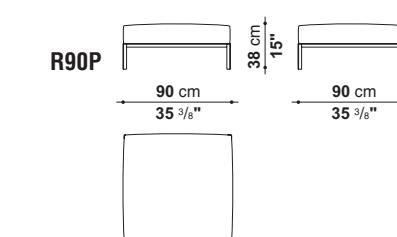

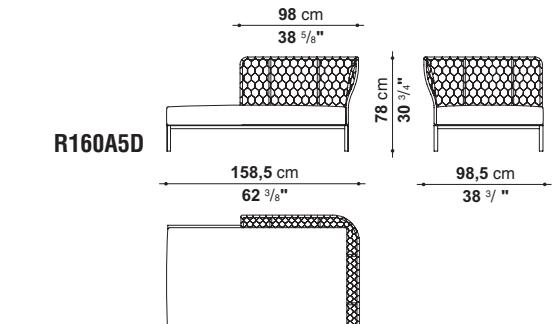

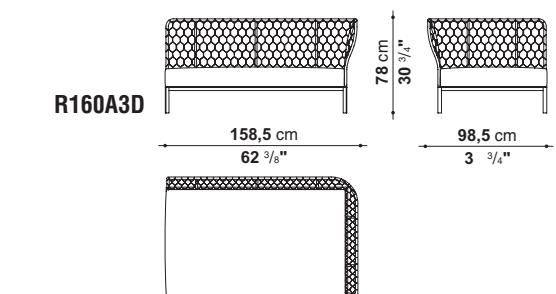

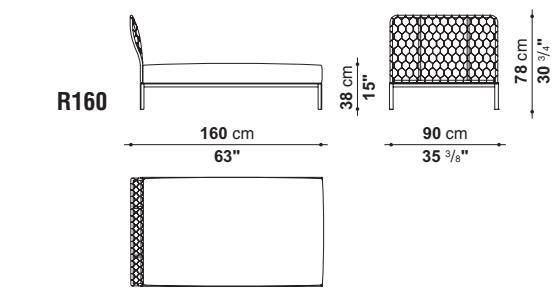

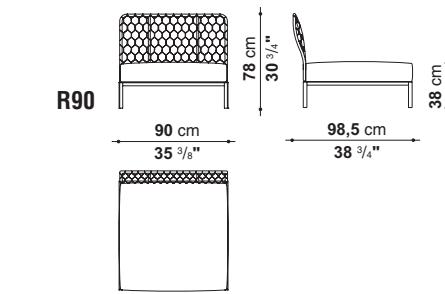

The result of experimentation in the field, Patricia Urquiola's work marks another visitation of the theme of woven furniture. Woven backs in polyethylene matched with a base in galvanised steel finished in black or white polyester powder coating produce a modular element of two different dimensions. The pieces can be easily combined to form linear or corner sofas, or also with chaise longue end units. The ottoman/table pieces can be used between seats, or to add depth to sofas.

Fruit d'une expérimentation réalisée sur le terrain, le travail de Patricia Urquiola marque un approfondissement supplémentaire du thème de l'entrelacement.

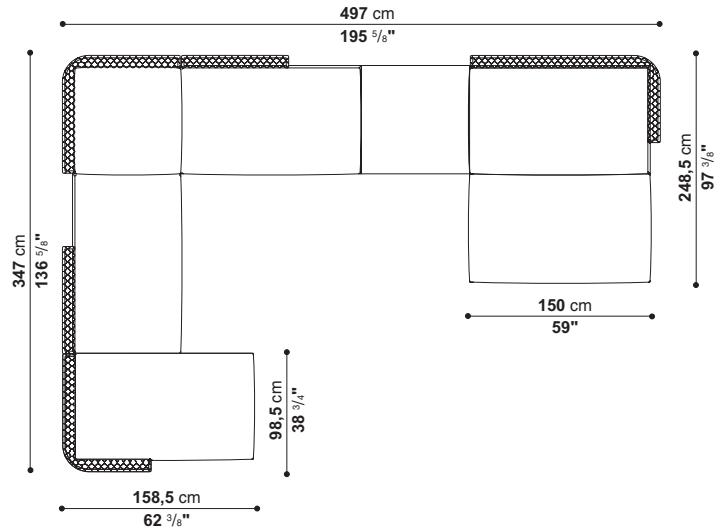

Des dossier entrelacés en polyéthylène s'associent à une base en acier zingué peint noir ou blanc à la poudre polyester, pour produire un élément modulaire de deux dimensions différentes, à disposer en toute liberté pour former des assises linéaires, angulaires ou avec chaises longues terminales. Les éléments pouf/petite table peuvent être utilisés soit pour alterner les assises, soit pour en augmenter la profondeur.

Als das Ergebnis eines Experiments vor Ort zeigt das Werk von Patricia Urquiola ein weiteres Beispiel zum Thema Geflecht. Geflochtene Rückenlehnen aus Polyethylen werden mit einer Basis aus mit Polyesterpulver schwarz oder weiß lackiertem verzinktem Stahl kombiniert und produzieren so ein modulares Element in zwei verschiedenen Größen, die ganz frei zusammengestellt werden können und dabei lineare und Eckmöbel oder Sitzmöbel mit Chaiselongue bilden. Puff-Beistelltisch-Elemente können sowohl zwischen den Sitzmöbeln als auch zur Vergrößerung von deren Tiefe verwendet werden.

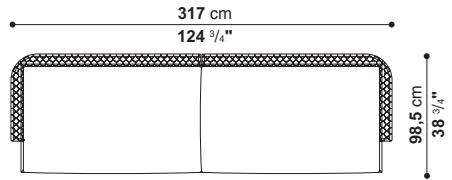

Fruto de una experimentación llevada a cabo en el campo, el trabajo de Patricia Urquiola marca una ulterior profundización del tema del entramado. Respaldos trenzados de polietileno se combinan con una base de acero galvanizado pintado negro o blanco con polvos de poliéster, creando un elemento modular de dos diferentes tamaños, que puede unirse con extremada libertad para formar asientos lineales, angulares o con terminales chaise longue. Elementos mesita-puf pueden ser utilizados ya sea para intercalar los asientos, o bien para aumentar su profundidad.
